EDUCATION

New York University — B.A. in Computer Science — Expected May 2030
New York, NY
Relevant Coursework (in progress): Data Structures, Discrete Mathematics

The Harker School — High School Diploma — Jun 2026
San Jose, CA
Relevant AP Examinations: Computer Science A, Calculus BC, Statistics

HONORS & AWARDS

USA Computing Olympiad (USACO) — Silver Division

WORK EXPERIENCE

University of California, Los Angeles (UCLA) — Student Researcher — Jul 2025 – Jan 2026
Environmental Data Science · Remote

- Developed an algorithm to predict plant water stress from thermal satellite imagery, evaluated against ground-based field measurements, working with UCLA faculty and PhD students.
- Co-authored the resulting manuscript (5th of 13 authors), submitted to *Global Change Biology*.
- Built interactive maps visualizing environmental disaster patterns from thermal remote-sensing datasets. **Python, QGIS, Excel.**

PROJECTS

Remake: Level Up Habits – iOS app, App Store — 2026 – Present

- Designed and shipped a daily self-improvement iOS app with a game-style rank system: users complete daily quests (workouts, nutrition, mindfulness), build streaks, and rank up from E-Rank to Monarch.
- Built it with AI-assisted development (Claude Code). Features include Apple Health sync (steps, sleep, weight), progress charts, barcode food logging, and a home-screen widget, all stored on-device.
- Handled the full release: TestFlight testing, App Store submission, and privacy policy and support page.

Stock Backtesting Website – biswas.net/sid/stocktest — 2026 – Present

- Built a browser-based simulator that tests whether a trading strategy beats a buy-and-hold baseline on historical market data.
- Modeled capital-gains taxes, trading commissions, and transaction costs in the simulation, so strategies that only beat the market before costs get exposed.
- Ported the Python backtesting engine to JavaScript so a full backtest runs in the browser in 5 seconds or less with no server, with tests confirming both versions produce identical results. **Python, JavaScript.**

Dou Shou Qi – biswas.net/sid/doushouqi — 2021 – 2025

- Built a playable web version of the strategy game Dou Shou Qi, with a full rules engine and computer opponents for complete matches. **JavaScript, HTML5.**

TECHNICAL SKILLS & LANGUAGES

Programming & Tools: Python, JavaScript, Java, HTML5, QGIS, Git, Microsoft Excel
Spoken Languages: English (native/bilingual), Bengali (full professional), Chinese (intermediate)

LEADERSHIP & ACTIVITIES

President, Harker Table Tennis Club — Sep 2022 – Jun 2026
